(54) Title: METHOD AND ARRANGEMENT IN COATING LINE FOR FIBRE-LIKE PRODUCT OR PRODUCTS

(57) Abstract: A method and an arrangement in a coat-
ing line for a fibre-like product or fibre-like products (6),
in which the fibre-like product (6) is di-rected from out-
put means (5) to a press head (7), by means of which
a tube (8) is formed around the fibre-like product. The
fibre-like product (6) is di-rected from the coating line
to a feed unit (1) in a preparatory position at the side.
When the coating process of a previous product has ter-
minated, the feed unit (1) is shifted to the coating line
and the fibre-like product (6) is fed into the press head
and is accelerated to the speed of the tube by means of
the feed unit (1). The feed unit (1) is detached from the
fibre-like product (6), when measurement parameters as-
sociated with the fibre-like product (6) and/or the tube (8)
reach the predetermined values and is shifted back to the
preparatory position at the side of the coating line.
